

MOBILE SHOPPING CART WASHER

INNOVATION

UNIKON - MOBILE SHOPPING CART WASHER

Shopping carts contain remnants of vegetables, fruit, milk, flour, soft drinks and paper. They form the breeding ground for fungi and bacteria.

Multiple laboratory tests show that supermarket shopping carts have 360 times more bacteria than a public toilet. Among them are harmful types of bacteria, such as Escherichia coli (E. coli) and salmonella, and viruses.

The Unikon Mobile Shopping Cart washer offers a solution to clean and sanitize shopping carts in a quick, efficient and environmentally friendly way. Unikon uses a closed system, so the water is cleaned by the washer itself with every washing cycle.

The Unikon Mobile Shopping Cart washer solution is:

- **complete.** Washing, rinsing and sanitizing in a vapor-proof washroom
- **efficient.** Its capacity of up to 180 carts an hour
- **safe and hygienic.** For the operator, supermarket customers and staff.
- **autonomous.** No external water and energy supply needed
- a competitive advantage to supermarkets

Unikon stands for:

- Quality. Use of A-brand components
- Over 50 years of experience
- User-friendliness
- Low maintenance costs
- Water and energy-efficient systems
- The globally available Unikon service

If you have any questions or if you are looking for an industrial washing solution, please don't hesitate to contact us.

UNIKON has offered high-end (customized) industrial cleaning and drying solutions for over 50 years!
